## Chairs' Welcome

Welcome to the 25th International Conference on Knowledge - Based and Intelligent Information & Engineering Systems (KES 2021), organised by KES International and held in Szczecin, Poland and also in virtual form on the KESonline virtual conference platform, 8-10 September 2021.

KES2021 is something of a celebration among the KES community as the 25th event in a series of broad-spectrum intelligent systems conferences first held in Adelaide, Australia in 1997. A number of KES conferences over the past two years had to be held in virtual form because of the global Covid pandemic. Hence, we are now delighted to be able to give delegates the opportunity to attend KES2021 in person in Szczecin, while at the same time providing the option of virtual presentations for those that prefer it.

The main aim of this KES conference series is to provide an internationally respected forum for the dissemination of research results and the discussion of issues relating to the theory, technologies and applications of intelligent engineering and information systems.

This truly international conference has attracted submissions from a substantial number of researchers and practitioners from all over the world, who submitted their papers to five general track sessions, 48 special sessions and two workshops on specific topics. A large number of submissions was received and each paper was peer reviewed by at least two members of the International Program Committee. From them, 533 high - quality papers were accepted for oral presentation and publication in *Procedia Computer Science*, submitted for indexing in Conference Proceedings Citation Index (CPCI), Scopus and INSPEC.

The conference chairs would like to express their gratitude to the Keynote Speakers:

- Prof Maria Virvou, University of Piraeus, Greece, title of talk: *"Human-AI Interaction: New Horizons and Challenges"*
- Prof Janusz Kacprzyk, Polish Academy of Sciences, Poland, title of talk: *"Linguistic data summarization: a step towards human comprehensibility of static and dynamic data"*;
- Prof James F. Peters, University of Manitoba, Canada and Adiyaman University, Turkey, title of talk: *"Computational Geometry and Topology of Data Views of Brain Activation Regions in rs-fMRI Videos. Betti Numbers, Ghrist Pictographs in Tracking the Persistence of Brain Activations"*;
- Prof Andrzej Piegat, West Pomeranian University of Technology, Poland, title of talk: *"Why multidimensional fuzzy arithmetic in problem solving"*;

- Prof Edward Szczerbicki, Gdansk University of Technology, Poland and The University of Newcastle, Australia, title of talk: *"AI vs AI: intelligence amplification with Decisional DNA and its extension to idream.technology"*; and Prof Valentina Balas, 'Aurel Vlaicu' University of Arad, Romania, title of talk: *"New Computational Intelligence-Based Research"*.

We would like to acknowledge the Programme Co-Chairs, the General Track chairs, and the International Programme Committee members and reviewers for their valuable efforts in the review process, helping us to guarantee the highest quality possible for the conference. We would also like to thank the organisers and chairs of the special sessions which make an essential contribution to the success of the conference. Lastly, we would like to thank all the authors, presenters and delegates for their valuable contribution and the Local Organising Committee for making arrangements in Szczecin which we are confident will make this an extraordinarily successful event.

KES International hopes and intends that KES2021 will make a significant contribution to international research collaboration and understanding, an essential task for the promotion of scientific joint work and excellence.

***Linguistic data summarization: a step towards human comprehensibility of static and dynamic data***

**Abstract:** Our main concern is an attempt to make the "computer", in the sense of all kinds of tools and techniques that are inherently based on the use of computers, to be human consistent, in the sense of being based on, or using human specific faculties. More specifically, we take as a point of departure the fact that for the human being the only fully natural means of communication and articulation is natural language which is "strange" to the computer. Therefore, it might be a good solution to use natural language in the formulation of problems, and presentation of results obtained as this would make them more comprehensible to the human user. Traditionally, visualization is used with much success. Much less popular is verbalization in which the results are presented in (quasi)natural language though in many applications, e.g. in transportation or military, voice messages, commands, etc., are preferable as they do not distract attention.

We present a conceptually simple, yet powerful concept of a linguistic data(base) summary which constitutes a short sentence(s) in natural language that summarizes the contents (semantics) of even very large data sets. For instance, in a personnel database, a linguistic summary may be "most young employees have low salaries". We use Yager's (1982) and Kacprzyk and Yager's (2001) approach that employs fuzzy logic with linguistic quantifiers. We present linguistic summarization of both static and dynamic (time series) data, and present main protoforms of such linguistic summaries. As an example of a real application we present the use of linguistic summaries for supporting decision making at a computer retailer that makes use of data from local and remote (Internet) sources of data, and yields linguistic summaries comprehensible to a human user.

We conclude with some remarks on the role of linguistic data summaries in the broadly perceived explainable artificial intelligence (XAI), and the users' trust in results obtained.

***Computational Geometry and Topology of Data Views of Brain Activation Regions in rs-fMRI Videos. Betti Numbers, Ghrist Pictographs in Tracking the Persistence of Brain Activations***

**Abstract:** In this talk, we consider the efficacy of the use of computational geometry and the topology of data in approximating, analyzing, comparing and measuring brain activation regions that appear in rs-fMRI videos.

Varying shapes of brain activation regions commonly occur during resting state (rs)-fMRI videos. In this paper, we demonstrate the utility of computational geometry combined with a topology of data approach in tracking the persistence of recurring blood oxygen level dependent (BOLD) signals in triangulated rs-fMRI video frames. This is accomplished by considering vortexes (nested, filled 1-cycles in a Whitehead Closure-finite Weak Topological Space) that cover brain activation regions with collections of path-connected vertexes with no end vertex. Measure of persistence of vortex shapes in BOLD signal propagation is carried out in terms of Betti numbers that rise and fall over time during spontaneous activity of the brain. Each vortex has a Rotman free group presentation, resulting from the presence of vertexes that serve as a basis for a free group (each vortex cycle vertex is represented by a linear combination of the basis elements). Consequently, each brain activation region vortex is represented by a Betti number equal to the rank of its free group.

Betti numbers of free group presentations of brain activation region vortexes appear, disappear and sometimes reappear in the frames during a typical rs-fMRI video. It has been observed in 1999 by Edelsbrunner that a topology of data circumvents noise in data and focuses on those data that persist over time. Computational topology of data provides a practical method in isolating, measuring, and classifying persistent lag structures BOLD signals in each rs-fMRI video frame that are mapped to point clouds in a finite, bounded region in an  $n$ -dimensional Euclidean metric space. Brain activation region vortexes in triangulated rs-fMRI video frames make it possible to approximate, measure, track and compare brain activation region shapes. As stepping stones to understanding the proposed approach to tracking rs-fMRI brain activation regions, basic results and examples are given.

***AI vs AI: intelligence amplification with Decisional DNA and its extension to idream.technology***

**Abstract:** The rapidly evolving Cognitive Society of the 21st Century together with imminent cyber revolution of Industry 4.0 needs increasingly smarter and abler decision-making enhancement and explainability to make this evolvement sustainable and human-acceptable. We address this global challenge by proposing intelligence amplification with Decisional DNA and its extension into idream.technology, which could provide decision-makers with the tools to choose the best outcomes for cognitive society that would promote sustainability, wellbeing, and security to individuals and populations. In nature, deoxyribonucleic acid (DNA) contains the genetic instructions used in the development and functioning of all known living organisms. The idea behind our vision is to develop an artificial system, an architecture that would support discovering, adding, storing, improving and sharing information and knowledge among agents and organisations through experience. We propose a novel Knowledge Representation (KR) approach in which experiential knowledge is represented by Set of Experience (SOE), and is carried into the future by Decisional DNA (DDNA). The DDNA extension into idream.technology has enormous and exciting potential of opening entirely new and so far not conceptually conceived horizons in developing and using collective intelligence.

**Biography:**

Edward Szczerbicki has had very extensive experience in the area of intelligent systems development over an uninterrupted 40-year period, 30 years of which he spent in the top information science research centres in the USA, UK, Australia, and Germany. In this area, he contributed to the understanding of information and knowledge management/engineering in complex systems operating in changing environments characterised by informational uncertainties. He has published over 400 refereed papers which explore the importance and power of experiential knowledge in intelligence augmentation. His academic experience includes ongoing and visiting positions with Gdansk University of Technology, Gdansk, Poland; Strathclyde University, Glasgow, Scotland; The University of Iowa, Iowa City, USA; University of California, Berkeley, USA; Hannover University, Hannover, Germany; Chengdu University of IT, Chengdu, China; INSA Rouen Normandie, Rouen, France; TU Berlin, Germany; and The University of Newcastle, Newcastle, Australia.

***Human-AI Interaction: New Horizons and Challenges***

**Abstract:** A new model of human -AI interaction emerges in the new era of Artificial Intelligence- empowered software which exhibits highly autonomous behaviour based on intelligent systems' decisions. AI off-loads human cognitive burden and resolves cyberspace navigation disorientation by performing dynamic adaptations on user personalisation, information filtering, hyperlink labelling, nudging and recommendation while employing user analytics on user preferences, personality, cognitive status, emotions, mood, goals and intentions of humans. The underlying reasoning of such behaviour includes machine learning, neural networks, decision technologies, data mining, fuzzy logic, cognitive and other mechanisms, all of which produce more human-like user interfaces but with a degree of uncertainty. As such, Human-AI interaction reforms significantly the classical human-computer interaction model that was primarily based on predictable computer behaviour rather than highly decision making, changeable and intelligently hypothesizing AI. Yet, human needs in the two-part interaction remain important concerning issues, such as ensuring and preserving usability, utility and explainability of AI.

This talk aims to explore AI and humans as parts of the newly established dialogue by highlighting the significant advancing benefits and discussing challenges. An overview of the state-of-the-art will be presented as well as the author's personal viewpoint on establishing and preserving principles and procedures in the new dialogue of Human-AI Interaction.

### **Model-Based Optimal Control and Reinforcement Learning: a Path to Safe Data-Based Policies?**

Professor Sebastien Gros

**Abstract:** Reinforcement Learning and MPC have natural connections that we will explore in this talk. We will discuss a recent, fundamental result in learning-based MPC, which formally explains how RL and MPC can be combine, and clarifies the role of the (inaccurate) model in MPC. One of the key motivations for using MPC in the context of Reinforcement Learning is the possibility to introduce formalism and guarantees on the behavior of the resulting policy. In particular, stability and safety guarantees can be formally discussed in the context of MPC-based RL. We will discuss recent results on that topic.

**Bio:** Sebastien Gros got his PhD degree from EPFL in 2008 in the field of control and optimization. After a journey by bicycle from Lausanne to the Everest base camp, he worked for a short while in the energy industry before returning to academia as a post-doc in KU Leuven, in the field of numerical optimization. In 2013, he joined Chalmers University of Technology in Sweden as an assistant Prof., where he was promoted to associate. He joined NTNU in 2019 as a full Prof. He is currently leading a research group working on the combination of formal optimal control methods with Reinforcement Learning methods.

11:30 - 12:30 CET

### **Role of case-based reasoning for explainable AI**

Prof Nirmalie Wiratunga

**Abstract:** A right to obtain an explanation of the decision reached by a machine learning model is now an EU regulation. Different stakeholders may have different background knowledge, competencies and goals, thus requiring different kinds of interpretations and explanations. In this talk I will present an overview of explainable AI (XAI) methods with particular focus on the role of case-based reasoning (CBR) for XAI. Specifically, we will look at recent work in post-hoc exemplar-based explanations that use CBR for factual, near-factual and counterfactual explanations.

An alternative role of CBR involves reasoning with end-users' explanation experiences to enable the sharing and reusing of experiences by users for users.

Here I will present our initial work towards creating the iSee XAI experience reuse platform (<https://isee4xai.com/>) where our aim is to capture and reuse explanation experiences.

**Bio:** Nirmalie Wiratunga is a research professor at RGU's School of Computing, with over 20 years' experience in computer science and Artificial Intelligence (AI) research and education. She is also adjunct IDUN professor at the Norwegian University of Science and Technology, and best known for her work on case-based reasoning for **personalised** decision support systems. Her recent work funded through EU's Horizon2020 and ERA-NET schemes explores learning with **few-data** and **explainable** AI for neural computation models. She serves on numerous AI programme committees and has senior and advisory roles on the international joint conference on AI and International conference on CBR respectively.

## KES TRANSACTIONS -- THE KES OPEN ACCESS LIBRARY

KES Transactions is a book series containing the results of applied and theoretical research on a range of leading-edge topics. The series accepts conference proceedings, edited books and research monographs. Papers contained in KES Transactions may also appear in the KES Open Access Library (KOALA), our own online gold standard open access publishing platform.

## TRAINING AND SHORT COURSES

KES can provide live and online training courses on all the topics in its portfolio. KES has good relationships with leading universities and academics around the world, and can harness these to provide excellent personal development and training courses.

## DISSEMINATION OF RESEARCH RESULTS

It is essential for research groups to communicate the outcomes of their research to those that can make use of them. But academics do not want to run their own conferences. KES has specialist knowledge of how to run a conference to disseminate research results. Or a research project workshop can be run alongside a conference to increase dissemination to an even wider audience.

## THE KES-IKT KNOWLEDGE ALLIANCE

KES works in partnership with the Institute of Knowledge Transfer (IKT), the sole accredited body dedicated to supporting and promoting the *knowledge professional*: those individuals involved in innovation, enterprise, and the transfer, sharing and exchange of knowledge. The IKT accredits the quality of innovation and knowledge transfer processes, practices activities, and training providers, and the professional status of its members.

## ABOUT KES

Formed in 2001, KES is an independent worldwide association involving about 5000 professionals, engineers, academics, students and managers, operated on a not-for-profit basis, from a base in the UK. A number of universities around the world contribute to its organisation, operation and academic activities. KES International Management Ltd is a private limited company that services the KES International organisation.
